Total testing is the unique combination of laboratory testing, process monitoring and know-how from Uster Technologies.

New capacitive, optical and foreign matter sensors are at the core of the USTER QUANTUM 3. For the first time ever, the system shows the full yarn body, thanks to powerful electronics. A new foreign matter sensor uses multiple light sources in combination with the new capacitive sensor to sort out colored foreign fibers from non-disturbing vegetable matter. completed by a brand new PP clearing module.

CATEC being the official agent and Service Station of USTER in Egypt is responsible of USTER equipments.

We will be glad to assist you.
